

SIMPLE STEPS TO WATER DAMAGE RESTORATION

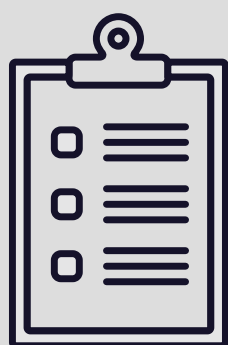

Get Your Home Back to Normal

1

CALL JENKINS RESTORATIONS

The first step is **contact and emergency dispatch** from a company like Jenkins Restorations, who can be on scene quickly. Our call center team is available for you 24/7 so we're available whenever you need us.

2

WATER DAMAGE INSPECTION

One of our highly-qualified team members will come take a look at the damage to your home.

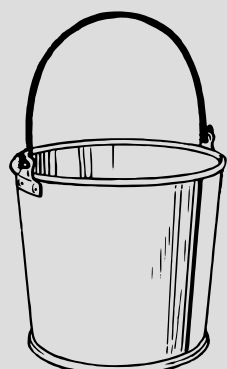

At this point, we will begin working directly with your insurance company to handle logistics.

3

WATER MITIGATION

This process begins almost immediately. We will first stop the water source and ensure that any undamaged possessions are protected from damage.

4

WATER EXTRACTION

Water will be extracted from your home. Our team uses industry-standard equipment to ensure that there is no water hidden in carpets, furniture, walls, and ceilings.

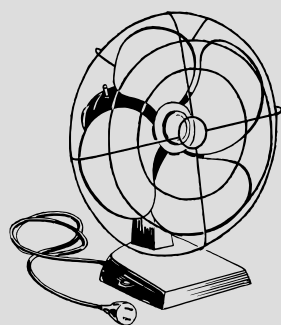

5

CLEANUP AND REPAIR

Instead of replacing all water damaged items, our goal is to restore them back to their former glory.

At this stage, our team will also do any repairs to your home as well as take steps to remove and prevent mold growth.

6

STRUCTURAL DRYING

After all obvious water has been removed, the team will use and monitor humidity to remove the last of the moisture. This will prevent secondary water damage such as warped floors and walls.

7

RESTORATION & REMODELING

At this stage, our GC-Repairs team will handle any final repairs to your home, major and minor. This is the last step to getting your home- and your life- back to normal!
